*New design improves power and signal for compact automotive, motor and harsh industrial applications*

## **TURCK's M40 Right Angle Connector Offers Robust Connectivity in Small Spaces**

To improve combined power and signal capabilities for applications tight on space, TURCK introduces its M40 right angle connector. The new design of these overmolded products offers reduced clearance while continuing to offer a durable and proven connectivity solution for a wide range of applications, specifically for automotive, motor and harsh industrial automation applications.

The M40 right angle connectors are capable of up to 35 amps. The connectors are IP67 rated, for protection against dust and water ingress, and the products are 100 percent factory tested for superior performance and reliability.

The M40 right angle connectors are available as male or female, in standard and custom lengths, and pigtails or extensions. The product will also work interchangeably with other M40 powerfast products which include mating receptacles, cordsets, splitters and jumper plugs.

### **About TURCK**

TURCK is a pioneer in industrial automation technology, providing customers with a comprehensive line of quality and advanced technology products in a fast, flexible and accurate manner. With more than 3,200 people working in 27 countries, TURCK has built global partnerships with customers based on engineering expertise, flexibility and our willingness to take on engineering challenges that others won't.
