### **TURCK Overmolded M40 *powerfast*® Connectors Provide Superior Protection in Harsh Environments**

Minneapolis, MN—December 11, 2013—TURCK introduces new overmolded M40 *powerfast*® connectors, delivering durable power connectivity in demanding environments. Offering a more robust connectivity solution than field-assembled versions, overmolded M40 *powerfast* connectors are 100 percent factory tested to ensure optimal performance in harsh industrial automation applications.

TURCK overmolded M40 *powerfast* connectors feature both power and signal capabilities within the same connector, and are capable of up to 35 amps. The M40 *powerfast* line offers male or female, straight connectors, standard and custom lengths and pigtails or extensions. For a complete system, the *powerfast* line also provides mating receptacles, cordsets, splitters and a jumper plug.

“Overmolded M40 *powerfast* connectors offer superior reliability and durability,” said Jay Bartsias, Product Manager, TURCK. “In comparison to traditional field-assembled connectors, these connectors are designed to provide a more cost-efficient, tamper-proof solution with ingress protection in demanding applications, including automotive, conveyor OEMs and material handling.”

Allowing for a discrete or distributed power system, TURCK M40 *powerfast* connectors are ideal for power applications, including applications with motors, lights and heaters. The connectors feature a protection rating of IP67 for optimal protection against dust and water ingress.

TURCK is an industry leader providing superior quality sensing, connectivity and network products to help manufacturers improve their automated processes. For other TURCK product or technical information, contact:
