## TURCK's VB2 Splitter Offers Enhanced Visibility and Improved Ingress Rating

*New design improves flexibility with dual-sided mounting capability*

PLYMOUTH, Minn. (Aug. 26, 2014) – [TURCK](#) announces the availability of a redesigned [VB2 splitter](#) with LEDs. The new VB2 features a translucent black overmolded design, which encapsulates the LEDs and protects them from physical damage while also complementing visibility. The design enhancement also enables the LEDs to be visible from both sides of the splitter, allowing it to now be mounted on either side where the previous version only allowed mounting on one side for the LEDs to be visible.

This VB2 splitter is used to consolidate two separate discrete PNP device signals into a single cable and can be used in any application multiple discrete PNP signals are being used. It is an ideal solution for applications trying to use multiple sensors or send multiple signals from a confined area. The LEDs provide a visual indication of when the circuit has power applied and when discrete signals are present.

The VB2 has a rating of 10-30 VDC at up to 4 amps. The new overmolded design provides the splitter with an improved ingress rating of IP68. Products that are given an IP68 rating must first pass TURCK testing which requires them to be submerged at a depth of 6 feet for 24 hours. To find out more about the VB2 splitter, please visit [www.turck.us](http://www.turck.us).

### About TURCK

TURCK is a pioneer in industrial automation technology, providing customers with a comprehensive line of quality and advanced technology products in a fast, flexible and accurate manner. With more than 3,200 people working in 27 countries, TURCK has built global partnerships with customers based on engineering expertise, flexibility and our willingness to take on engineering challenges that others won't. For more information, visit [www.turck.us](http://www.turck.us).
